

ABSTRACT OF THE DISCLOSURE

Disclosed herein is a camera lens assembly for portable wireless terminals. The camera lens assembly includes a first lens housing rotatably attached to a portable wireless terminal so that the first lens housing can be rotated about a first rotating axis, and a second lens housing
5 rotatably attached to one end of the first lens housing so that the second lens housing can be rotated about a second rotating axis extending perpendicularly to the first rotating axis. The second lens housing has a camera lens mounted therein. The camera lens can be independently rotated about two rotating axes extending transversely to one another, whereby a picture-taking operation can be effectively carried out in various directions.
